#### **DETAILED ACTION**

# Response to Amendment

The response of 1/23/07 is noted. Claims <u>1</u>-7 (method), <u>9</u> (system) <u>10</u> (apparatus) are pending and are rejected as followed.

## Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 9 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter, not a process, machine, manufacture, or composition of matter. The elements of the system such a workflow manager and a contextual visualization are mere modules or program codes.

## Claim Rejections - 35 USC § 112

2. Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The phrase "message represents a reference event" or other "event" is vague because, a message or information can not represent an event. In claim 1, it says "the message indicating an occurrence of the business event" so the message can describe about an event.

## Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 09/829,151 Page 3

Art Unit: 3629

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. Claims 1-7, 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over BATTAT et al in view of COGNOS or PEOPLESOFT or ORACLE.

As of 1/23/07, independent method claim 1 is as followed:

- 1. (Previously presented) A method for reporting a value of a key performance indicator comprising:
  - (a) receiving information identifying a key performance indicator to monitor;
- (b) identifying at least one business event associated with the selected key performance indicator;
- c) receiving a business event message indicating an occurrence of the business event, the business event message including business data describing the business event;
- (d) in response to receiving the business event message, electronically determining the value of the key performance indicator based on the business data; and

Application/Control Number: 09/829,151

Art Unit: 3629

(d) displaying the determined value of the key performance indicator via a contextual visualization interface.

Note: for convenience, alphabetical letters (a)-(d) are attached to the beginning of each step.

In a network management system, BATTAT et al is cited to teach a method for reporting /displaying information with respect to change of events, comprising the steps of the claimed invention above, except for the fact that the information at issue is not about a key performance indicator (KPI) to monitor {see Fig. 3, steps (301), (302), (303), (304), (305), (306), (307), (308), (309), (310), and (311), Fig. 1, Fig. 10j, col. 8-9, col. 15, lines 22-40).

ORACLE is cited to teach a business monitoring and management application and integrated information source including the use of tracking key performance indicators (KPI) and forecasting business opportunity to improve competitive advantage and enhance business operation with multidimensional analysis by empowering the business managers and executives to easily analyze e-business sales and marketing data via a standard web browser (see page 1). The software provides global access to real time sales forecasts, marketing trends and internet click-stream data to enhance a company's customer intelligence (see page 1). It would have been obvious to modify the teachings of BATTAT et al to further include KPI application as taught by COGNOS for at least one of the many benefits cited above.

PEOPLESOFT is cited to teach a business monitoring and management application and integrated cause-and-effect perspective on key management processes

Art Unit: 3629

by providing the capabilities necessary to <u>design and monitor</u> critical success factors and <u>calculate KPI</u> to help managers develop and execute organizational strategy {see page 1}. The PeopleSoft Balanced scorecard leverages data and metrics from internal and external data sources and provides a focal point for EPM's four business solutions: Strategic & Financial management, Workforce Analytics and Industry Process management, and Customer Relationship management {see page 1}. It would have been obvious to modify the teachings of BATTAT et al to further include KPI application as taught by PEOPLESOFT for at least one of the many benefits cited above, i.e. KPI to help managers develop and execute EPM's four business solutions: Strategic & Financial management, Workforce Analytics and Industry Process management, and Customer Relationship management.

applications across the enterprise based on a shared dimensional framework. From the building of subject area data marts, to the automatic design and deployment of business models and reports, DecisionStream is the foundation for end-to-end Bl. Its integration with PowerPlay, Impromptu, and Cognos Visualizer allows users to identify and analyze trends and key performance indicators and drill through to relational data reports for transaction-level details. The result is that all users have access to consistent data for more informed and coordinated analysis, reporting, and decision-making across and outside the enterprise. It would have been obvious to modify the teachings of BATTAT et al to further include KPI application as taught by COGNOS for at least one of the many benefits cited above.

Art Unit: 3629

As for dep. claims 2-6 (part of <u>1</u> above), which deal with the type of business event message or features of the messages with respect to events, these are non-essential to the scope of the claimed invention and are fairly taught in Fig. 3A and 3 element (304) of BATTAT et al.

As for dep. claim 7 (part of <u>1</u> above), which deal with the type of PKI, i.e. prediction (trend or forecast), this is fairly taught in COGNOS or PEOPLESOFT or ORACLE, as described above.

As for independent system claim <u>9</u> or <u>10</u>, which is merely the system/apparatus to carry out the method of claim 1 above, it's rejected over the system/apparatus of BATTAT et al (Figs. 1, 2 and 3) and COGNOS or PEOPLESOFT or ORACLE.

Alternatively, the set up of a computer system to carry out a respective computedmethod claim would have been obvious to a skilled artisan.

## Response to Arguments

6. Applicant's arguments, see Response, filed 1/23/07, with respect to the rejection(s) of claim(s) 1-7, 9-10 under the various rejections have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of the teachings cited above.

No claims are allowed.

Art Unit: 3629

7. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct@uspto.gov">http://pair-direct@uspto.gov</a>. Should you have any questions on access to the private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).

In receiving an Office Action, it becomes apparent that certain documents are missing, e. g. copies of references, Forms PTO 1449, PTO-892, etc., requests for copies should be directed to Tech Center 3600 Customer Service at (571) 272-3600, or e-mail <a href="mailto:customerService3600@uspto.gov">CustomerService3600@uspto.gov</a>.

Any inquiry concerning the merits of the examination of the application should be directed to <u>Dean Tan Nguyen at telephone number (571) 272-6806</u>. My work schedule is normally Monday through Friday from 6:30 am - 4:00 pm. I am scheduled to be off every other Friday.

Should I be unavailable during my normal working hours, my supervisor <u>John Weiss</u> can be reached at (571) 272-6812.

The main <u>FAX phone</u> numbers for formal communications concerning this application are <u>(571) 273-8300</u>. My personal Fax is <u>(571) 273-6806</u>. Informal communications may be made, following a telephone call to the examiner, by an informal FAX number to be given.
